

REDUCE DIESEL CONSUMPTION BY UP to 15%

The **C**ombustion **C**atalyst **S**ystem for Diesel Gensets from Emissions Technology

- Typical fuel savings of 5-15%
- Increased net power output
- Reduces particulates, NOx, CO & soot
- Lowers torsional vibration levels
- Reduces Hydrocarbons
- No adverse engine effects
- Very attractive ROI

The CCS works by increasing combustion efficiency and precisely delivering the catalyst vapor upstream of the turbocharger intake.

The CCS can be installed on a diesel genset in a few hours and requires minimal maintenance.
